

Arjun V

Applied AI Engineer with focus on Generative and Agentic AI

arjunvijayan.452@gmail.com · +918606235370 · Kochi, Kerala

PROFESSIONAL SUMMARY

Applied AI Engineer with ~4 years of experience in building production-grade Generative and Agentic AI systems for real-world business applications. Proficient in Python, LangChain, LangGraph, MCP, AgentOps, RAG pipelines, MLOps, and cloud platforms including AWS SageMaker, Azure AI, GCP Vertex AI. Strong focus on problem-solving, system design, and scalable implementations, with experience across predictive modeling, document intelligence, and workflow automation.

TECHNICAL SKILLS

Machine Learning · Python (Strong Proficiency) · GenAI frameworks: LangChain, LangGraph, MCP, AgentOps · RAG pipelines and vector databases · Fine-tuning and prompt engineering for LLMs · MLOps · Cloud AI platforms: AWS SageMaker, Azure AI, GCP Vertex AI (preferred) · Agentic AI concepts · multi-agent orchestration, planning, memory · Deep Learning · Data Visualisation · Languages: Python · IDEs: VSCode, PyCharm, Jupyter · Tooling: LangChain, LlamaIndex, AI Agents

PROFESSIONAL EXPERIENCE

Senior Associate Data Science · Publicis Sapient | 07/2025 · Present | Bangalore

- Developed systems using LangChain and LangGraph to extract and structure pricing and commercial terms from contracts and invoices using document intelligence and rule-based + ML pipelines
- Built a pricing validation engine to verify contract logic against operational data, reducing manual effort by 30-40%
- Designed normalization pipelines to handle heterogeneous document formats at scale
- Implemented confidence scoring and validation workflows to support human-in-the-loop review
- Built semantic retrieval layers for efficient querying over enterprise documents

Data Scientist L1 · Prezent AI Pvt Ltd | 10/2024 · 07/2025

- Developed an AI-powered presentation generation system that converts Excel/CSV inputs and user prompts into structured slide decks using storyline planning, template matching, and layout optimization, reducing manual effort by ~75%
- Architected a multi-stage agentic AI pipeline performing - intent classification from user prompts, storyline and slide-level planning, template mapping and layout adaptation and automated generation of charts, visuals, and contextual narratives.
- Built a robust Excel parsing engine handling complex formats (nested headers, irregular layouts) with ~80% structured extraction accuracy
- Improved system throughput by 40%+ using asynchronous LLM orchestration and parallel processing
- Enabled natural language querying over structured data via semantic indexing.

MTS - Data Scientist · ZOHO Corporation Pvt Ltd | 07/2022 · 10/2024

- Built and deployed a CRM-integrated churn prediction system on 50K+ users with 76% accuracy and 30-day risk forecasting
- Engineered longitudinal behavioral features (purchase velocity, engagement intervals) to improve predictive robustness
- Automated EDA and feature engineering workflows, reducing model development time by 40%
- Implemented SHAP-based explainability to surface actionable churn drivers
- Developed survival analysis models to predict time-to-next purchase for demand and inventory planning
- Built resume parsing system (DL · LLM migration using Mistral) for semi-structured document extraction.

EDUCATION

· **Bachelor of Technology, Electrical and Electronics Engineering | 07/2018 · 07/2022 | Alappuzha, India**

Activities and societies: National Service Scheme Volunteer, Placement cell Coordinator, Served as student representative
